

APEX Tutorial

Author Email: zhuoyli@connect.hku.hk

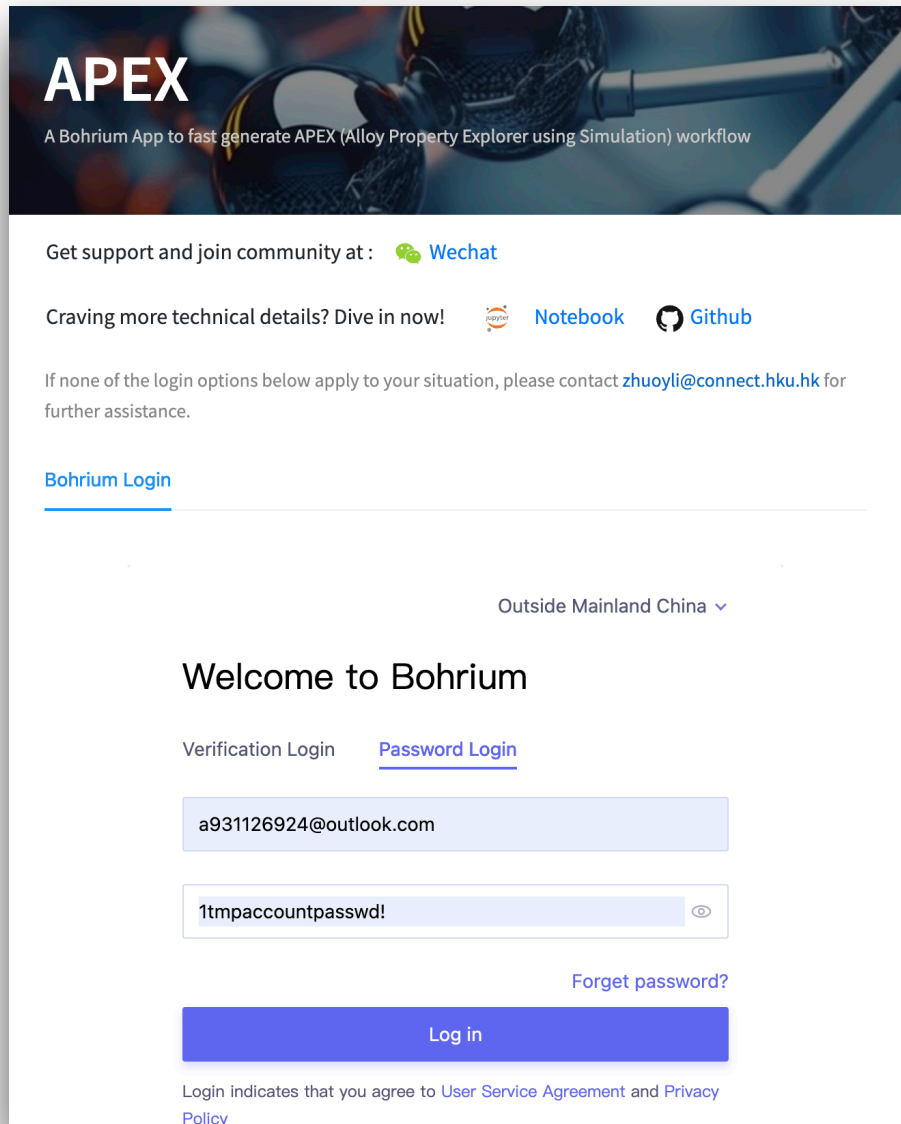

A. Hands-on APEX Bohrium App

Here we demonstrate how to use APEX Bohrium APP by submitting a computational workflow with the **EAM** pair potential using **LAMMPS** to calculate the **EOS curve** and **elastic properties** of **titanium**.

1. Click [here](https://app.bohrium.dp.tech/apex/) to enter the main page of **APEX Bohrium App** (<https://app.bohrium.dp.tech/apex/>), and use following pre-registered temporary **Bohrium** account to login:

Email: a931126924@outlook.com

Password: 1tmpaccountpasswd!

APEX
A Bohrium App to fast generate APEX (Alloy Property Explorer using Simulation) workflow

Login indicates that you agree to [User Service Agreement](#) and [Privacy Policy](#)

- At the top right, click **Example Artifacts** and download two files: the **POSCAR** of HCP Ti ([POSCAR.Ti.hcp](#)) and **EAM potential** file of Ti ([Ti.eam.fs](#))

- Return to the **Form** page, then select the relevant version 1.2 from the **Select Version** dropdown menu in the Form page, and then choose '**1-LAMMPS**' in the **Select Sub Model** section below:

4. Drop the page down, and upload above two files accordingly:

Configurations (Configuration 'POSCAR' to be tested (name differently for multiple files))

[Upload from local](#) [Choose from workspace](#)

POSCAR.Ti.hcp

Drag and drop files here
Limit 500MB per file

[Browse files](#)

POSCAR.Ti.hcp 162.0B

Fail to open a file selection dialog?

Potential Models (Interatomic potential files required during test)

[Upload from local](#) [Choose from workspace](#)

Ti.eam.fs

Drag and drop files here
Limit 500MB per file

[Browse files](#)

Ti.eam.fs 0.7MB

5. Drop to the page bottom and click **Next** button to parameter setting page, and set global computing configuration

Lammps Image Name (LAMMPS image address for MD simulation) ?

registry.dp.tech/dptech/prod-11045/deepmdkit-phonolammps:2.1.1

Lammps Run Command (LAMMPS run command (lmp instruction file name should be 'in.lammps')) ?

lmp -in in.lammps

Apex Image Name (Image address including dependencies for APEX to run) ?

registry.dp.tech/dptech/prod-11045/apex-dependency:1.2.0

Scass Type (Bohrum machine node type for MD simulation) ?

c8_m31_1 * NVIDIA T4

Group Size (Number of tasks per parallel run group) ?

2 - +

Pool Size (For multi tasks per parallel group, the pool size of multiprocessing pool to handle each task (1 for serial, -1 for infinity)) ?

1 - +

6. Next, set up atomic interaction details. Select **"eam_fs"** from the **Inter Type** dropdown, and add one key–value pair **{Ti: 0}** in the **Type Map** area.

Interaction Type ^

Inter Type *(Interatomic pair style type)* ?

eam_fs ▼

Type Map

Element type map (Key for element name (H, He ...); value for mapping order: 0, 1, 2 ...)

Add Item Clear All

Key	Value	
Ti	0	- + Remove

7. Next, check **"Select Elastic"** and **"Select Eos"** in the series of property type boxes. Upon selection, the configuration for computational parameters will expand. Then, drop to the page bottom and click **Next** button

Phonon Spectra ^

☐ Select Phonon *(Do phonon spectra exploration)* ?

GSFE Curve (Gamma Line) ^

☐ Select Gamma *(Do GSFE curve (Gamma line) exploration)* ?

Vacancy Formation Energy ^

☐ Select Vacancy *(Do vacancy formation energy exploration)* ?

Interstitial Formation Energy ^

☐ Select Interstitial *(Do interstitial formation energy exploration)* ?

Surface Formation Energy ^

☐ Select Surface *(Do surface formation energy exploration)* ?

Elastic Const & Moduli ^

☐ Select Elastic *(Do elastic property exploration)* ?

Equation of State (EOS) ^

☐ Select Eos *(Do EOS exploration)* ?

8. Click **Next** button again to the final submission page.
9. Drop to the bottom, Select '**APEX Demo**' in **Bohrium Project** dropdown, then check the 'I agree to the term and conditions' before clicking final **Submit** button

Description

Submit MD workflow using LAMMPS

Initialization
In this stage, the system is being set up and initialized to prepare for the task. This includes configuring the necessary settings, loading any required data, and initializing any resources that will be used during the task.

PreProcessing
In this stage, the task is being submitted to the system for processing. This involves sending the task request to the server and waiting for a response to confirm that the task has been accepted.

Running
In this stage, the task is actively being processed by the system. This involves running the necessary algorithms and computations to

12. Upon completion of the calculations, all working directories and result files are automatically collected in the `/outputs/workdir/` directory, where users can browse and download them into local. The `'all_result.json'` file can be visualized by ``apex report -w all_result.json`` command of any APEX pre-installed GUI computer.

Success
In this stage, the task is success and you can check results.

B. Hands-on terminal submission on Bohrium

Please use the following pre-registered temporary [Bohrium platform](#) account to access the hands-on demonstration example notebook of APEX

Email: a931126924@outlook.com

Password: 1tmpaccountpasswd!

Project_id: 26924

Tutorial Notebook link: <https://nb.bohrium.dp.tech/detail/26383176824>

The screenshot displays the Bohrium platform interface. At the top, the 'English' language dropdown is highlighted with a red box and labeled 'Language switch'. Below the navigation bar, the notebook title 'Hands-on to APEX (v1.2) on Bohrium' is visible. A red arrow points to the 'Connect' button, labeled 'Step 1: Click Connect'. A modal dialog box titled 'Select project' is open, showing 'APEX Demo (ID:26924)' selected, with a red box around it and the label 'Step 2: Select "APEX Demo"'. The dialog also shows 'System-created default p... (ID:26925)' as an option. The background shows the notebook content, including a 'Getting Started Guide' section.
